

RE:BUILD

DECODE. REBUILD. EVOLVE

Decode Sheet

Team Name	Dietcoke
Website	www.skyscanner.co.in
Domain	Travel

Instructions to participants:

1. This is an analysis round, each team gets to choose a domain.A website corresponding to the domain you have chosen is assigned.
2. You must explore and analyse the website thoroughly within the given time.
3. Identify and document all major pages, features, functionalities, UI components, interactions, and user flows.
4. Interact with the website to understand what happens when different elements are clicked, hovered over, searched, filtered, or selected...
5. Record your observations in this Decode Sheet.
6. Participants must rely solely on their own observation and analysis of the provided website. Any form of automated extraction, external recreation, or AI-assisted analysis that bypasses the intended exploration process is not permitted.
7. The website itself should be your primary source of information for the analysis.
8. Ensure that your Decode Sheet is complete, clear, and submitted before the Round 1 deadline.
9. The information collected in this round will serve as the blueprint for Round 2 — REBUILD.

“Decode Sheet is a feature analysis document. This document will serve as your blueprint for the upcoming rounds. You are expected to record your observations here. You can start by documenting· Page & Navigation AnalysisFeature Identification, UI Analysis, Interaction Analysis, Responsive Analysis, User Flow. Be precise, observant, and document anything that could help you recreate the experience in the next round.”

Users can search for one-way, round-trip, or multi-city flights across hundreds of airlines and booking sites. Features include flexible date searches with price calendars, whole month views, and an "Everywhere" search to discover budget-friendly destinations worldwide.

Travelers can set up price notifications for specific routes and dates, while leveraging advanced filtering options by airlines, alliances, stops, layover durations, and connecting airports.

Compare hotel, resort, and vacation rental rates with guest reviews. Users can also browse rental car deals filtered by vehicle category, fuel policy, pickup locations, and ratings.

Account tools enable users to save favorite flights, organize trip plans, sync alerts, and manage preferences across devices. The mobile app offers mobile-only flight deals, instant push alerts, interactive planning tools, and home screen widgets.

Offers travel guides, destination insights, and low-cost airline aggregation comparing budget carriers like Air India and IndiGo. Key additions include an AI-Powered Travel Assistant for personalized itineraries and a Greener Choice Filter to highlight flights with lower carbon emissions.
